

The Avon-ISI EEBA provides fast emergency respiratory protection for escape from atmospheres that have suddenly become Immediately Dangerous to Life or Health (IDLH), such as sour gas. This Emergency Escape Breathing Apparatus is easy to use, allowing the wearer to begin escape in just seconds. In the event of an emergency, the worker simply opens the carrying pouch, turns the cylinder valve to the ON position then removes and dons the hood. The compact pouch contains the complete unit and can be carried around the waist, neck, or over the shoulder. The clear hood allows full peripheral vision and protection despite the wearer's hair length, facial hair or glasses.
